Portova

A project workspace for Portaldot

Portaldot Hacker House 2026
Ecosystem DApps

A launch leaves ongoing work

First users

Small Portaldot project teams with a token, collection or liquidity pool

A project needs a durable record of its assets and permissions.

Team access needs clear ownership, acceptance and revocation.

After launch, someone still has to notice important changes.

Customer interviews are the next validation step. These are the problems the pilot is designed to test.

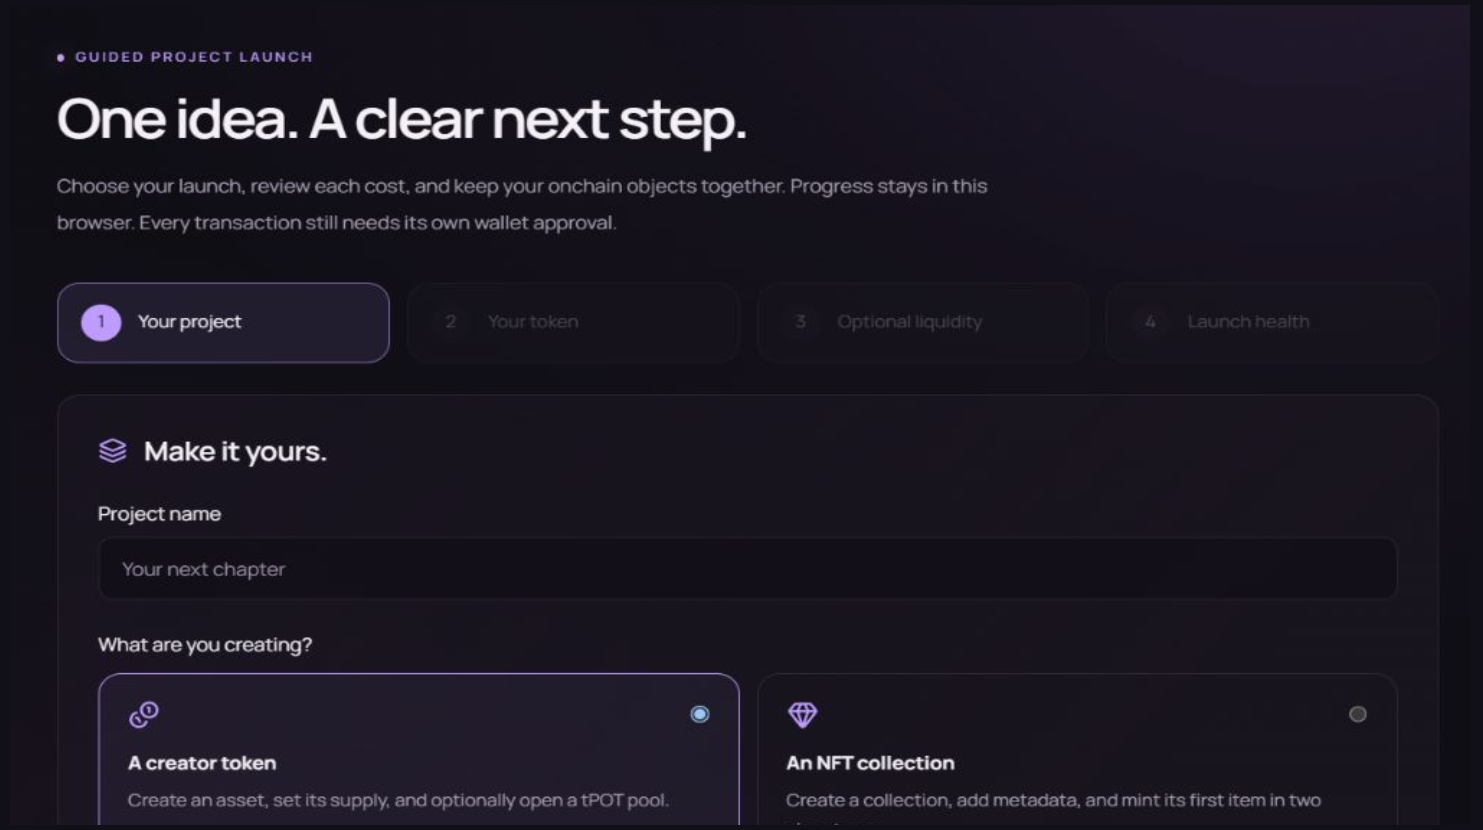

Project launch workflow

01 Create or import

Keep native object IDs and the launch plan together.

02 Review each operation

Wallet approvals, fee checks and recoverable receipts.

Built on native Portaldot capabilities

Product action	Native integration
Token creation, metadata and minting	Assets
Collection creation and item minting	Nfts
Pool creation, liquidity and swaps	AssetConversion
Reviewed proceeds transfer	Balances.transferKeepAlive

Runtime calls through a Substrate wallet. No custom Portova contract.

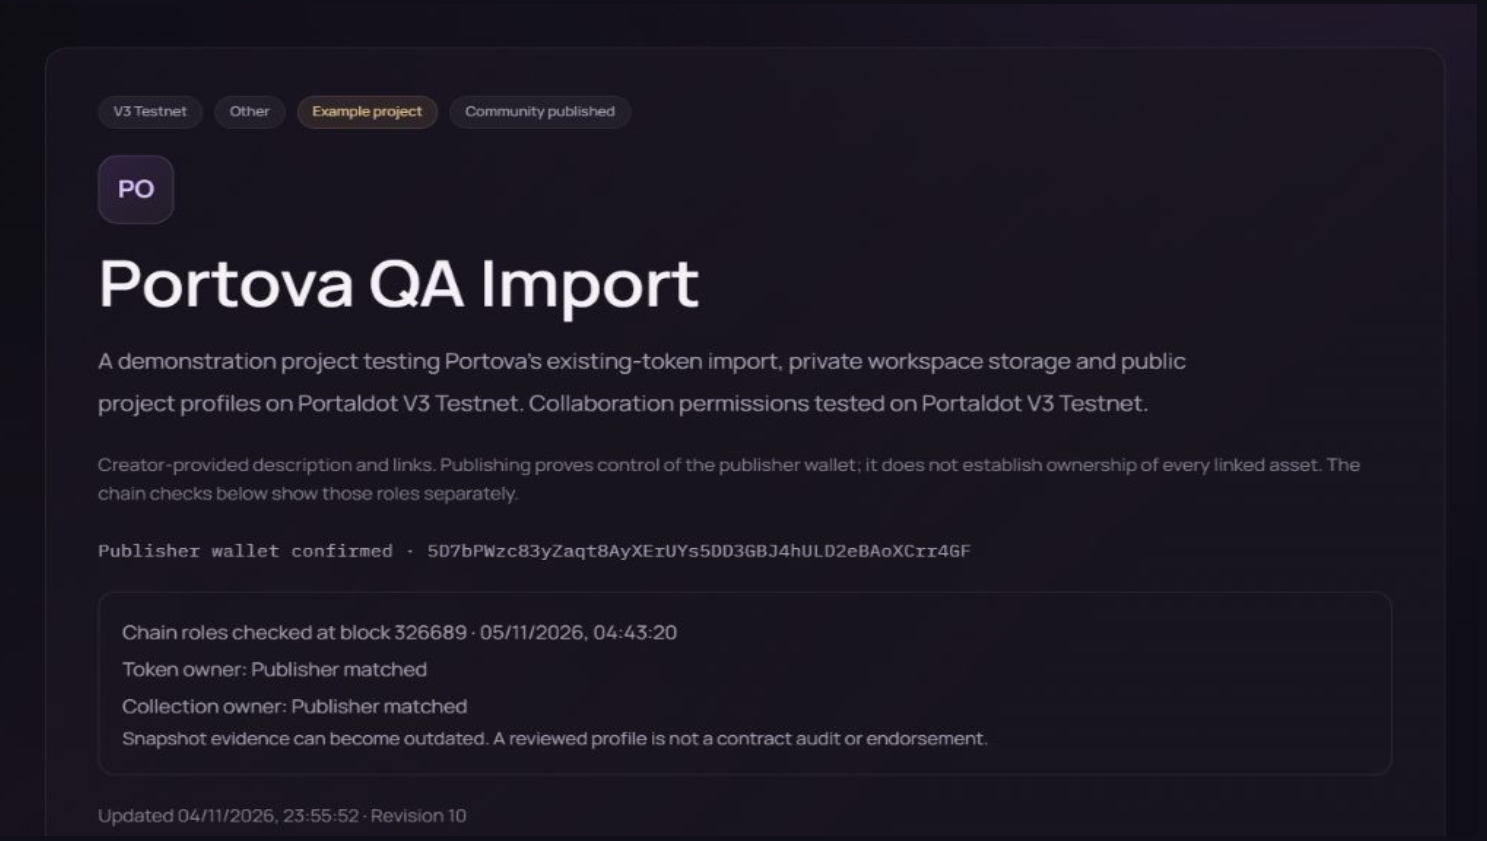

Workspace access and publication

Private by choice

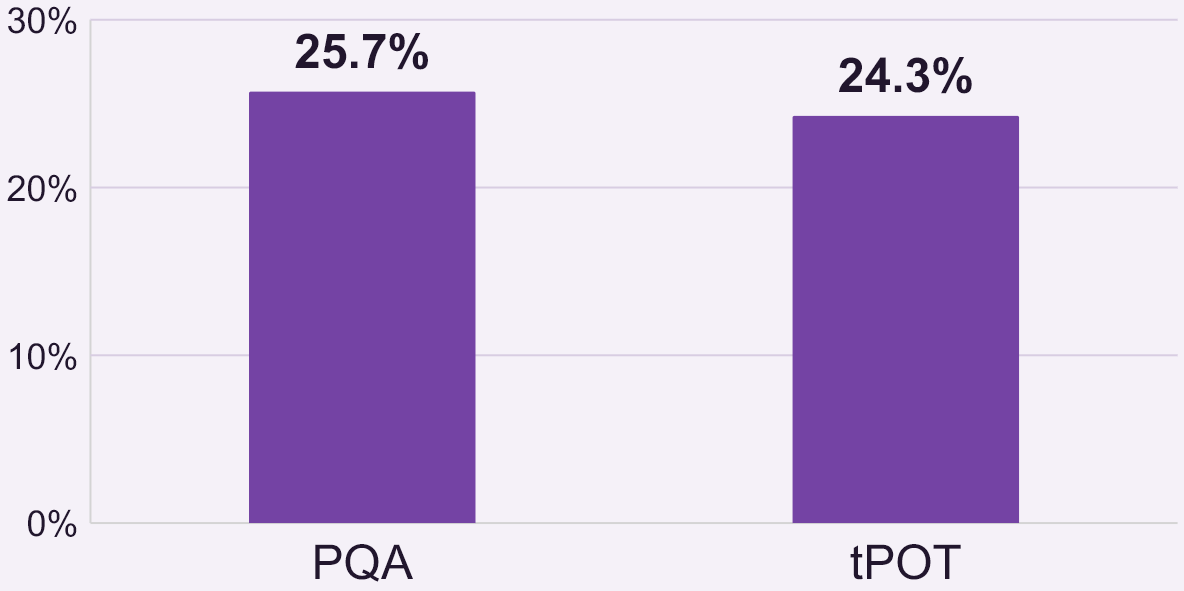

Signed cloud storage and explicit publication.

Controlled team access

Accepted viewer/editor invitations. Owner-only access settings. An audit trail.

Pool monitoring in a controlled test

Two alerts at block 325864

A controlled liquidity withdrawal crossed the 20% reserve-change threshold.

Asset	Before	After
PQA	100	74.2837
tPOT	5	3.7865

Recorded V3 testnet result. Sampled finalized snapshots, with coverage and timestamps in the report.

Validation on the live V3 testnet

142

automated tests passing

CI, type checking and production build passed

Live wallet checks

Native token/NFT flows, treasury, liquidity and two-way swaps.

Workspace checks

Private/public access, team roles, revocation, receipt backups and monitoring.

Maintainer-run acceptance and automated checks. Detailed boundaries are in the appendix.

Contribution to the Portaldot ecosystem

Guided native transactions

Guided creation and import help a project team work with Assets, Nfts and AssetConversion.

Public project evidence

Public profiles link real objects. Dated role evidence and documented receipts make claims easier to check.

Public implementation and test evidence support continued review and development.

A service model for ongoing operations

Plan	USDC / 30 days	Cloud projects	Core value
Explorer	0	3	Native tools and cloud records
Pro, proposed	19	20	Monitoring and indexed reports
Team, proposed	49	100	Pro plus up to 10 collaborators

Free pilot: 30 days, five projects and three collaborators per project

Checkout remains disabled. Proposed prices need customer validation. No paid revenue is claimed.

The next customer milestone is three pilots

Recruit

Speak with ten qualified teams through developer communities and direct project outreach.

Use

Run three scoped pilots around a real launch or an existing project workspace.

Decide

Measure return use, time saved, support effort and willingness to renew before charging.

These are planned validation targets. They do not represent acquired users or paying customers.

Planned product roadmap

Priority	Next work	Release gate
1. Reliability	Staging, restore drills, worker capacity	Measured coverage and recovery
2. Team operations	Configurable alerts and opt-in notifications	Repeated use in scoped pilots
3. Participation	User/project rankings and achievements	Transparent scoring and anti-abuse beta
4. Commercial service	Validated plans and manual USDC renewals	Demand, payment QA and support readiness

Leaderboard concept: opt-in profiles, seasonal ranks and verifiable contributions. No reward token is planned for this release.

Continued ecosystem support

The next phase is to make Portova useful to independent project teams.

Pilot introductions

Teams with a native asset, collection or pool to operate.

Technical review

Runtime integration and transaction/security boundaries.

Operational support

Reliable worker capacity and historical data access.

Portova in action

Live application

portova.vercel.app

Public repository

github.com/siyaind/portova

Siya
Portaldot V3 Testnet pilot

Release scope and verification

Current scope

V3 testnet pilot
External bridge
Checkout disabled
NFT trading runtime-disabled
Sampled monitoring with incomplete history

Example and receipt evidence

Asset 644897333
Collection 24
LP 17
Asset creation finalized at block 321441
Role snapshot at block 326689

Technical evidence and QA record

Public minting, exact collaborator-limit and profile-review-request acceptance remain unverified. An independent review and recovery/load testing remain real-value launch gates.
